

## ***ETC6000 Burner Controls Gain AGA Approval***

The ETC6000 Series of Electronic Burner Controls have gained AGA (Australian Gas Association) certification. This paves the way for ETC's innovative Burner Management Systems to be installed in Australia and other territories requiring AGA approval.

Energy Technology & Control Managing Director, Martin Thirsk commented 'The addition of AGA to the list of approvals for the ETC6000 Range that already includes UL, FM, CE & TRD underlines ETC's commitment to supplying burner controls that are approved globally. In the current economic climate many of our customers are looking to export markets as part of their corporate strategies. AGA certification comes just weeks after the ETC6000 was successful in being approved to the EN61580 (2001) standard allowing the ETC6000 Burner Controls to be selected for systems requiring equipment suitable for inclusion in a S.I.L.3 (Safety Integrity Level) loop.'
